

PROGUTTER

PROGUTTER scrapers will make cleaning your gutters easy. To stop gutter overflow please follow these steps.

PROGUTTER scrapers contain a universal (acme) thread and screw directly onto the end of standard extension poles.

(pole not included)

The holes/indents around the thread enable the use of our angle adapter (sold separately).

Instructions of use:

Step 1 Depending on the side of guttering (left or right) that is to be cleaned, screw the PROGUTTER scraper onto a pole.

Step 2 Place the PROGUTTER scraper carefully into the gutter avoiding the tiles. With the pole un-extended pull the first metre of debris to yourself and collect.

Step 3 Then with the second metre of pole extended pull the next metre of debris to yourself and collect.

Step 4 Keep extending the pole and collecting debris one metre at a time until full length of the pole is extended.

We would recommend using a suitable pair of gloves when removing debris from guttering.

PROGUTTER scrapers are designed to miss gutter securing clips. If the scraper gets stuck in the guttering for any reason please remove it gently. **Never force the scraper by pulling when in use. Always avoid debris falling into running outlets by pulling away not towards!**

IMPORTANT NOTICE: always follow your own health and safety procedures. These instructions are for information only and we will not except any liability for injuries caused whilst using our products.
